PEARL®

MODEL VX141MSPRO™ MASONRY/BRICK SAW

SERIAL NUMBER -

You should record the Serial Number of your Tile Saw on this Owner's/Operator's Manual and on the Warranty Card. The Warranty Card must be sent back with all the required pertinent information for the warranty to take effect.

Caution! Read Safety and General Instructions carefully before using saw for the first time.

i. GENERAL SAFETY RULES FOR ALL POWER TOOLS

m/!ackslash WARNING! Read all instructions. As with all machinery there are certain hazards involved with operation and use of the machine. The following basic safety precautions should be followed at all times to reduce the risk of fire, electric shock and serious personal injury to you or others. Keep these important operating instructions with this product.

1. Know your power tool - read owner's/operator's manual carefully. Learn its applications and limitations as well as the specific potential hazards unique to this tool.

2. Keep guards in place - and in working order.

3. Ground all tools - if tools are equipped with three prong plug, it should be plugged into a three-hole electrical receptacle. If an adapter is used to accommodate a two-prong receptacle, the adapter lug must be attached to a known ground. Never remove the third prong.

4. Remove wrenches - Form a habit of checking to see that adjusting wrenches are removed from tool before turning it "on".

5. Keep work area clean. Cluttered areas and benches invite accidents.

- 7. Keep children and visitors away. All children and visitors should be kept at a safe distance from work area.
- 8. Make workshop childproof with padlocks, master switches or by removing starter keys.
- 9. Do not force tool. It will do the job better and be safer at the rate for which it was designed.
- 10. Use right tool. Do not force tool or attachment to do a job for which it was not designed.

11. Wear proper apparel. Do not wear loose clothing, gloves, neckties, rings, bracelets or other jewelry that may get caught in moving parts. Non-slip footwear is recommended. Wear protective hair covering to contain long hair.

12. Always use safety glasses. Wear safety glasses (must comply with ANSI Z87.1) at all times. Everyday eyeglasses only have impact resistant lenses; they are not safety glasses. Use face or dust mask if cutting operation is dusty, and ear protectors (plugs or muffs) during extended periods of operation.

13. Do not overreach. Keep proper footing and balance at all times.

14. Maintain tools in top condition. Keep tools sharp and clean for best and safest performance. Follow instructions for lubricating and changing accessories. Inspect tool cords periodically and if damaged, have repaired by authorized service facility.

15. Disconnect tools. When not in use, before servicing, and when changing accessories, such as blades, bits, cutters.

16. Avoid accidental starting. Make sure switch is in "off" position before plugging in power cord.

17. Use recommended accessories only. Consult the owner's manual for recommended accessories. The use of improper accessories may cause risk of injury to persons.

18. Never stand on tool. Serious **injury** could occur if the tool is tipped or if the cutting tool is accidentally contacted.

19. Check Damaged Parts. Before further use of the tool, a guard or other part that is damaged should be carefully checked to ensure that it will operate properly and perform it's intended function. Check for alignment of moving parts, binding of moving parts, breakage of parts, mounting, and any other conditions that may affect it's operation. A guard or part that is damaged should be properly repaired or replaced.

20. Never leave tool running unattended. Turn power "off". Do not leave tool until it comes to a complete stop.

- 21. Extension cords. Make sure your extension cord is in good condition. When using an extension cord, be sure to use one heavy enough to carry the current your product will draw. An undersized cord will cause a drop in line voltage resulting in loss of power and overheating. Extension cord tables (refer to page 21) show the correct size to use depending on cord length and nameplate ampere rating. If in doubt, use the next heavier gage. The smaller the gage numbers the heavier the cord.
- 22. Do not abuse cord. Never carry tool by cord or pull it to disconnect from receptacle, Keep cord from heat, oil, and sharp edges.
- 23. Guard against electric shock. Prevent body contact with grounded surfaces. For example, pipes, radiators, ranges and refrigerator enclosures.
- 24. Outdoor use extension cords. When tool is used outdoors, use only extension cords intended for use outdoors and so marked.

- 26. Drugs, alcohol, medication. Do not operate tool while under the influence of drugs, alcohol or any medication.
- 27. Store idle tool. When not in use, tool should be stored in a dry and locked place, out of reach of children.

WARNING! CALIFORNIA PROPOSITION 65: Sawing and drilling generates dust. Excessive airborne particles may cause irritation to eyes, skin and respiratory tract. To avoid breathing impairment always employ dust controls and protection suitable to the material being saw or drilled in accordance with OSHA (29 CFR Part 1910.1). Diamond blades improperly used are dangerous. Comply with ANSI Safety Code B7.1 and OSHA covering speed, safety guards, flanges, mounting procedures, general operating rules, handling, storage and general machine condition.

iii. FEATURES

iv. SPECIFICATIONS

VX141MSPRO MASONRY/BRICK SAW MAX. BLADE **CUTTING** CUTTING **MOTOR WEIGHT** SIZE **CAPACITY LENGTH** DEPTH 14" blade with 2 HP Induction 16" 5" 119 lbs. 33.7 x 19.5 1" (25.4mm) 115 v, 60 Hz, Max material uncrated x 25.4" 2,600 rpm arbor size 8 x 8 x16"

v. UNPACKING

Open the container. Carefully lift the saw out evenly by the frame. Be certain you have the following items before you discard the container:

• Saw

• Size 19 Open Wrench

• 14" saw blade

• 45°/90° rip guide

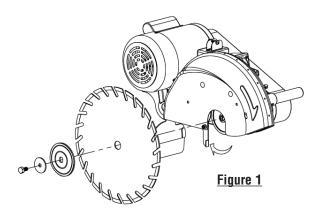

Universal wrench

Owner's manual

vi. INSTALLATION AND OPERATION

BLADE INSTALLATION

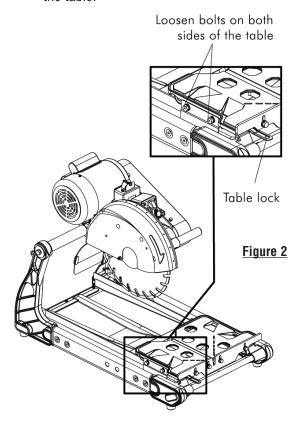

- 1. Rotate the blade bolt access door down. *See Figure 1.*
- 2. Remove the blade shaft bolt, washer and outer flange.
- 3. Place the blade onto the blade shaft. The bore of the blade should sit fully on a shoulder located on the inner flange. Make sure that the directional arrow on the blade is aligned with the rotation of the shaft.
- 4. Reinstall the outer flange, washer and blade shaft bolt in this order. Tighten the bolt using the provided wrenches

CUTTING TABLE ASSEMBLY

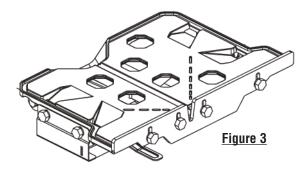

The cutting table comes preinstalled on the machine. To remove the cutting table perform the following steps:

- 1. Make sure the table lock is not engaged. *See Figure 2.*
- 2. Loosen the bolts as shown on right so the brackets they secure can slide down.
- 3. With both brackets down, lift the table from the rails starting from the left side.
- 4. Perform the steps in reverse to remount the table.

THE CUTTING TABLE

The heavy-duty cutting table provides the durability to handle large materials. *Figure 3.*

WARNING: Only use the 14" diameter blade for this saw. Setting smaller size of diamond blade may grab the material being cut, causing damage and possibly injury.

STEPS TO USE THE 45° / 90° RIP GUIDE

- Set the rip guide by positioning it on the desired dimension and tighten the threaded knob. Make sure that the rip guide is firmly tightened to avoid slippage. The rip guide can be used 90° rip cugts and 45° angle cuts from both the left and right side. (Note: The straight and 45° angled slits on the bottom of the rip guide.)
- After the rip guide is positioned for the desired cut, place material flat against the rip guide and the measurement rail. For the 45° rip cuts, place the corner of material in the open slot of the measurement rail.
- 3. Simply line up the material being cut with the appropriate pre-marked lines on the cutting table.
- 4. Now you are ready to make your cut.

CUTTING DEPTH

The recommended cutting depth is 1/4" below the cutting table surface. When setting the cutting depth, do a practice pass with the table to make sure the blade does not cut into it.

| Blade Diameter | Cutting Depth |
|----------------|---------------|
| 14" | 5 inch |

WARNING: It is recommended to cut all the way through the material being cut. Failure to do so can result in the diamond blade grabbing the material causing damage and possibly injury.

The VX141MSPRO Masonry Saw is designed to cut at any cutting. It can perform plunge cutting (table is fixed and the cutting head is in motion), jam cutting (cutting head is fixed and the table is in motion) or step cutting (a combination of the both).

Plunge Handle

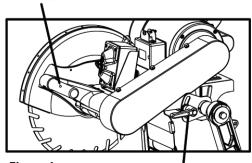

Figure 4

Depth Control Knob

- 1. Before adjusting the cutting depth always disconnect the electrical power supply.
- To adjust the VX141MSPRO's cutting depth, rotate the depth control knob counterclockwise while holding the plunge handle See Figure 4. Only loosen the knob enough so the cutting head freely moves.
- 3. Reposition the cutting head as necessary and then lock it in place by rotating the knob in the reverse direction. Tighten the knob firmly.

CHOP / PLUNGE SAW OPERATION

To operate the VX141MSPRO as a chop or plunge saw: pull up on the Angle Lock Pin, rotate 90 degrees, and release. Now the cutting head can be rotated by pulling up or pushing down on the cutting head handle. When not in use, always lock the head into one of the three cutting height positions.

| HEAD POSITION | APPLICATION | |
|-------------------------------|---------------------------|--|
| Fixed head | Jam cutting brick/block | |
| Fixed head upper | Diamond blade replacement | |
| Moving head | Chop or plunge cutting | |
| Moving head with moving table | Step cutting | |

vii. PROPER BLADE USE

DO'S

- Inspect blades daily for cracks or uneven wear.
- Always use appropriate blade for material being cut.
- Inspect arbor shaft for uneven wear before mounting blade.
- Always use blades with the correct arbor shaft size.
- Ensure that blade is mounted in the correct direction.
- Use proper safety equipment when operating the saw.
- Secure the blade to the arbor with a wrench.
- Periodically check the blade for cracks or bond fatigue.
- In addition to the following, always follow wet recommendations.
- Use appropriate blade for material being cut.
- Inspect segment blades for segment cracking or loss.
- Do not use damaged blades.
- Use proper safety equipment when operating the saw.

DON'TS

- Do not operate the saw without safety guards in position.
- Do not operate the saw with blades larger than 14".
- Do not cut dry with blades marked "Use Wet".
- Do not exceed manufacturer's recommended maximum RPM.
- Do not force blade into material. Let blade cut at its own speed.
- In addition to the following, always follow wet recommendations.
- Do not make long cuts with dry blades. Allow them to air cool.
- Do not use the edge or side of blade to cut or grind.
- Do not attempt to cut a radius or curve.
- Do not cut too deep or too fast into the material.
- Do not cut any material not recommended by blade manufacturer.

viii. CARE AND MAINTENANCE

WARNING: For your safety before performing any maintenance on the saw turn off the power switch and unplug the power cord.

CLEANING

AFTER EVERY USE OF THE MACHINE:

- · Remove dirty water from container.
- Remove dirt and mud from the bottom of the container

AFTER WET CLEANING AND BEFORE USING THE MACHINE AGAIN:

 Connect the machine to an electric power outlet equipped with a GFCI safety power breaker. If the safety power breaker cuts off the electrical power supply, do not try to operate the machine but have it checked by an authorized dealer first.

BEFORE AND AFTER A PROLONGED TIME:

- After not using the machine for a prolonged period of time, clean and lubricate all movable parts.
- Check that the saw is sitting properly on the folding stand.
- Check that all the screw joints and nuts are fixed.
- Check that the roller table is in its guides and that is easily moves to and from.
- With the saw blade removed, switch on the motor for an instant and switch it off again. If the motor does not run, have the machine inspected by a qualified electrician.

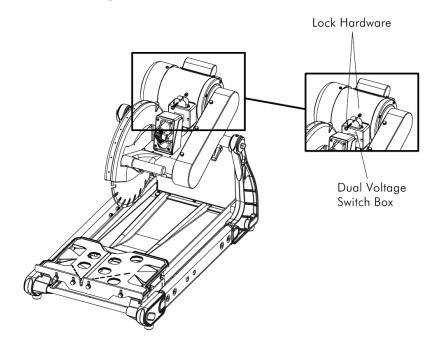

ix. CHANGING MOTOR VOLTAGE

WARNING: Turning on the saw, while the motor is set at 115V, to a 230V electrical power supply will cause irreparable damage to the motor.

To change the voltage of the motor, perform the following steps:

- 1. Disconnect the electrical supply.
- 2. Remove the lock hardware as shown on right.
- Toggle the voltage select on the dual voltage switch box to the desired voltage.
- 4. Re-lock the voltage select using the lock hardware.

The VX141MSPRO motor has the ability to accept power from a 115V and 230V power source. By default the motor is set to accept power from a traditional 115V power source. For best motor performance run the motor using 230V.

x. ELETRICAL MOTOR SPECIFICATIONS

| Horse Power | 2 HP |
|-------------|-----------|
| Volts | 115V/230V |
| Amps | 7.5A/15A |
| Motor RPM | 3,250 rpm |
| Cycle | 60 Hz |

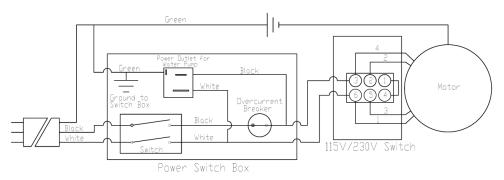

WARNING: To avoid permanent motor damage you must use the correct extension cord. Never use more than one extension cord at a time. Follow the chart for proper size.

| WIRE Gauge | 115V | 230V |
|---------------|------|------|
| 12 AWG | 25' | 100' |
| 10 AWG | 50' | 150' |
| 8 AWG | 75' | 250' |
| 6 AWG | NA | NA |

Recommendations:

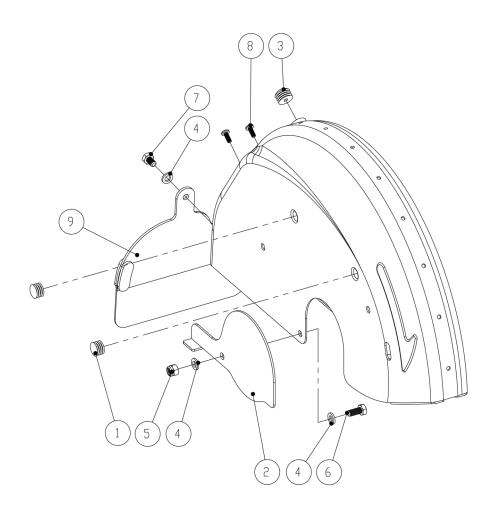

- It is recommended that a **20 amp circuit** be used while operating this saw. This will prevent possible power interruption or loss.
- Always plug saw as close as possible to the power source while operating. This will allow you to receive optimum electricity.

Electrical Wiring Diagram

xii.TROUBLESHOOTING

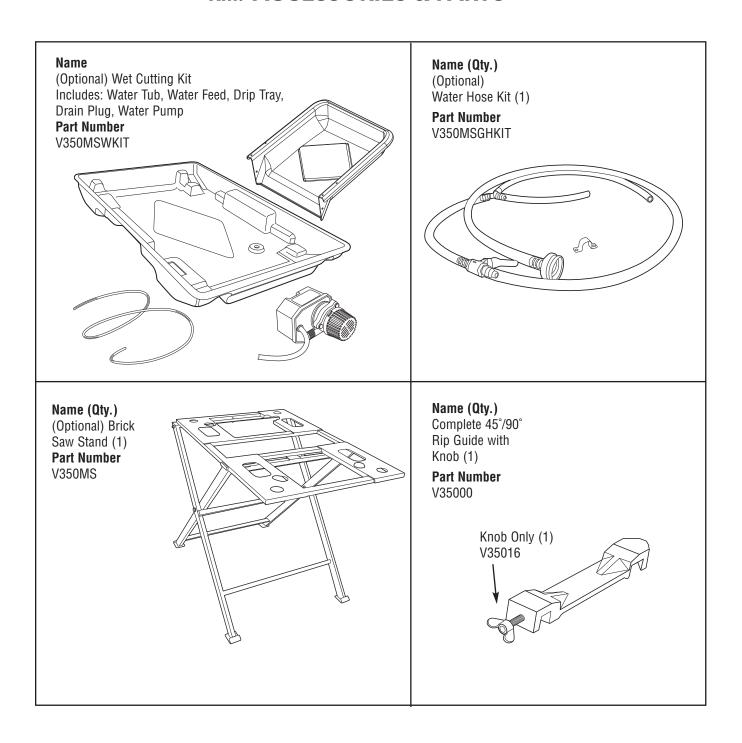

WARNING! For your safety and the safety of others, turn the power switch off and always remove the plug from power source before troubleshooting. Repairs performed by unauthorized personnel could cause serious hazard. We recommend that service to this tool be performed by a qualified service technician with original equipment replacement parts.

| Problem | Possible Cause | Solution |
|--|--|---|
| Machine does not run when switched on. | Power cord not properly fixed/plugged in. | Check that the machine is properly connected to the power supply. |
| | Power cord defective. | Have the power cord checked, replaced if necessary. |
| | Main power switch defective. | Have the main power switch checked and replaced if necessary by a qualified electrician. |
| | Loose electrical connection inside the electric system. | Have the whole electric system of the machine checked by a qualified electrician. |
| | Motor defective. | Have the motor checked and replaced if necessary by a qualified technician. |
| Motor stops (power cut out). | Too much pressure exerted while cutting. | Exert less pressure when cutting. |
| | Incorrect specification for saw blade. | Use a saw blade which corresponds to the material being cut. |
| | Saw has a defective electric system. | Have the electric system of the saw checked by a qualified technician. |
| Poor machine performance little power. | Power cord/extension cable too long or cable still wound up inside cable drum. | Use a power cord/extension cable of the rated length, use a cable drum with a cable fully extended. |
| | Power network is insufficient. | Observe the electric ratings of the machine and connect it only to a power network which complies with these ratings. |
| | Drive motor no longer runs at rated speed (r.p.m.). | Have the motor checked by a qualified electrician and have it replaced if necessary. |

| Problem | Possible Cause | Solution |
|--|---|---|
| Irregular run of the saw blade. | Poor tension in the blade material. | Return the saw blade to the manufacturer. |
| Excessive wear. | Wrong type of saw blade. Shaft of motor causes wobbling. Overheating. | Use harder saw blades. Have bearings of the motor of the motor replaced. Ensure optimum flow of cooling water. |
| Saw blade wobbles when running. | Saw blade is damaged or bent. | Have the saw blade aligned/flattened. Clean the receiving flange. |
| | Flange of the saw blade is damaged. Shaft of the motor is bent. | Solder the diamond segments of the old blade onto another saw blade or use a new blade. Replace the saw blade flange. Replace the electric motor. |
| Diamond segment becomes loose. | Overheating of the saw blade; cooling water not sufficient. | Have the diamond segment soldered on the blade again; ensure optimum flow of cooling water. |
| Cracks in or near the diamond | Saw blade too hard. | Use a softer blade. |
| segment. | Fixed flange is worn out. | Have the fixed flange replaced. |
| | Motor shaft bearing. | Replace the bearing of the motor shaft. |
| Saw blade is blunt. | Saw blade type is unsuitable for the material being cut. | Use appropriate type of saw blade. |
| | Saw blade type is unsuitable for the machine performance. | |
| | Saw blade too hard. | |
| | Diamond segments are blunt. | Sharpen the diamond saw blade. |
| Appearance of cut is not optimal. | Poor tension in the blade material. | Return the saw blade to the manufacturer. |
| | Too much load placed on the saw blade. | Use a suitable saw blade. Sharpen the saw blade. |
| | Diamond segments are blunt. | |
| The center hole in the saw blade has become wider due to wear. | The saw blade has slipped on the motor shaft when running. | The arbor of the saw blade must be fitted with an appropriate adapter ring. Check the receiving flange and have it |
| | | replaced if necessary. |

| Problem | Possible Cause | Solution |
|-----------------------------------|--|---|
| Saw blades shows blooming colors. | Lateral friction when cutting. | The material feed is too high; proceed more slowly. |
| Grinding marks on the saw blade. | Material is not being fed parallel to the saw blade. Poor tension in the blade material. | Ensure that the direction of feed is absolutely parallel to the saw blade. Adjust the roller table/have it adjusted. |
| | Too much load on the saw blade. | Have the saw blade tensioned. The material feed is too high, proceed more slowly. |

xiii. ACCESSORIES & PARTS

xiv. THE RIGHT BLADES DOES THE RIGHT JOB

For the most effective cutting and blade life always use the recommended Pearl Abrasive Co. blade.

| PEARL BLADE | | A | PPLICATIO | N | |
|-----------------------------------|---------|---------|-----------|------------|---------------------|
| SERIES | BRICK | BLOCK | PAVER | HARD BRICK | REFRACTORY BRICK |
| P1 EXV™ Concrete/Masonry | \odot | \odot | 0 | | |
| P2 PRO-V™ Concrete/Masonry | \odot | \odot | \odot | | |
| P4™ (CP) Concrete/Masonry | \odot | \odot | \odot | | |
| P5™ (CSP) Concrete/Masonry | \odot | \odot | 0 | | |
| P2 PRO-V™ (SDS) Hard Materials | | | | 0 | |
| P5™ (NSP) Hard Materials | | | | • | \odot |
| P5™ (BB) Masonry | \odot | \odot | \odot | \odot | |

xv. HOW TO ORDER PARTS

Please have the following information ready before calling:

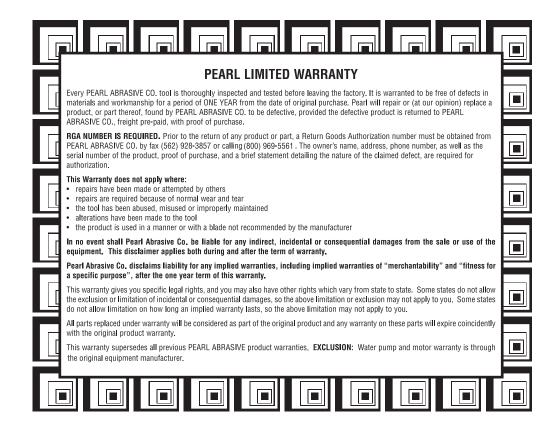

- Serial Number of your Tile Saw
- Model Number of the Tile Saw
- When purchased and where
- Part Description

All parts listed may be ordered from your Local warehouses. If the part is not stocked locally, call our Corporate office and ask for our Customer Service Department. For Technical Support call **1-800-969-5561**. In <u>Canada</u> call **1-800-387-0008**. There is a \$25.00 minimum order.

Return Policy: Return goods for credit or exchange on the basis of the following terms: (1) They must be current products; (2) Items returned for replacement or refund should be in original cartons and must be accompanied by a packing slip with the following information: Returned Goods Authorization (RGA) number obtainable from Customer Service Department • List of items returned • Reason(s) for return(s) • Copy of original invoice(s); (3) Freight charges must be assumed by sender; (4) Returning goods are subject to a 15% handling charge to cover our cost of repacking and restocking. All Prices are subject to change without notice.

Disclaimer: Pearl Abrasive Co. reserves the right to make changes or improvements on its products without incurring an additional obligation including any obligation to make corresponding changes or improvements to products previously manufactured or sold. Pearl reserves the right to discontinue products at any time without notice.
